

SACE STAGE 2 · REVISION CHECKLIST

# Biology

Every topic you need to know, in one checklist.

4 topics

45 checkpoints

TopMark Tutors

## How to use this checklist

Work through every line and tick honestly. Do the whole thing in one sitting before you revise anything — that first pass becomes your study plan for the term.

1

### Revised

You have gone back over the content and understand it.

2

### Practised

You have done real exam questions on it, not just read notes.

3

### Confident

You could do it in the exam, under time, with no notes.

**Most students stop at column 1.** Re-reading notes feels like studying, but marks are won in columns 2 and 3. Anything ticked in column 1 and blank in column 3 is exactly where your marks are leaking.

*Externally assessed by an ELECTRONIC (online) examination — practise on screen, not just on paper.*

Produced by TopMark Tutors as a free study resource, structured around the SACE Stage 2 Biology subject outline. It is a revision aid only and is not produced, endorsed, or reviewed by the SACE Board of South Australia. Always check the current subject outline for your enrolment year and confirm content with your teacher.

## Topic 1 — DNA and Proteins

TOPIC 1 OF 4

## DNA structure and replication

| CONTENT                                                       | REVISED                  | PRACTISED                | CONFIDENT                |
|---------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Structure of DNA and RNA, and differences between them        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| DNA replication, including the role of key enzymes            | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Chromosome structure and the organisation of genetic material | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Gene expression

|                                                                |                          |                          |                          |
|----------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Transcription and translation, step by step                    | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Using a codon table accurately (a common source of lost marks) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Types of mutation and their effects on the resulting protein   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Regulation of gene expression and the influence of environment | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Proteins and enzymes

|                                                                |                          |                          |                          |
|----------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Amino acid structure and levels of protein structure           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Enzyme action, active site and specificity                     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Effect of temperature, pH and concentration on enzyme activity | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Interpreting enzyme rate graphs                                | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Biotechnology

|                                                                                |                          |                          |                          |
|--------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| DNA profiling and gel electrophoresis                                          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| PCR and its applications                                                       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Genetic modification techniques, plus benefits, risks and ethical implications | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## WEAK SPOTS TO COME BACK TO

## Topic 2 — Cells as the Basis of Life

TOPIC 2 OF 4

## Cell structure and transport

| CONTENT                                                               | REVISED                  | PRACTISED                | CONFIDENT                |
|-----------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Prokaryotic vs eukaryotic cells, and organelle structure and function | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Membrane structure (fluid mosaic model)                               | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Diffusion, osmosis, facilitated diffusion and active transport        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Surface area to volume ratio and its consequences for cell size       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Cellular energy

|                                                                                     |                          |                          |                          |
|-------------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Photosynthesis: light-dependent and light-independent stages, and where each occurs | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Cellular respiration: glycolysis, Krebs cycle and electron transport chain          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Correctly locating each stage within the cell (frequently examined)                 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Aerobic vs anaerobic respiration and comparative ATP yield                          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Cell division

|                                                                        |                          |                          |                          |
|------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| The cell cycle and its checkpoints                                     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Mitosis vs meiosis, and clearly identifying where they differ          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Crossing over, independent assortment and sources of genetic variation | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Cancer as uncontrolled cell division                                   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## WEAK SPOTS TO COME BACK TO

---

---

## Topic 3 — Homeostasis

TOPIC 3 OF 4

## Principles of homeostasis

| CONTENT                                                                         | REVISED                  | PRACTISED                | CONFIDENT                |
|---------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Negative feedback loops: stimulus, receptor, control centre, effector, response | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Writing a complete feedback loop without skipping a step                        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Tolerance limits and the consequences of exceeding them                         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Control systems

|                                                                              |                          |                          |                          |
|------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Structure and function of the nervous system, and nerve impulse transmission | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| The endocrine system and mechanisms of hormone action                        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Comparing nervous and endocrine control (speed, duration, specificity)       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Regulation in the body

|                                                         |                          |                          |                          |
|---------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Thermoregulation in endotherms and ectotherms           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Osmoregulation and kidney function, including ADH       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Glucoregulation: insulin, glucagon and diabetes         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Regulation of blood pressure and the role of adrenaline | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## WEAK SPOTS TO COME BACK TO

## Topic 4 — Evolution

TOPIC 4 OF 4

## Evidence and mechanisms

| CONTENT                                                                    | REVISED                  | PRACTISED                | CONFIDENT                |
|----------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Evidence for evolution: fossils, comparative anatomy, molecular evidence   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Natural selection and the conditions required for it to occur              | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Distinguishing natural selection from selective breeding and genetic drift | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Allele frequency change within populations                                 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## Speciation and biodiversity

|                                                                  |                          |                          |                          |
|------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Reproductive isolating mechanisms (pre-zygotic and post-zygotic) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Allopatric and sympatric speciation                              | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Interpreting phylogenetic trees and cladograms                   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Human impact on biodiversity and conservation strategies         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Antibiotic and pesticide resistance as evolution in action       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## WHAT TO DO WITH THE BLANKS

# The gaps you just found are the whole point.

Every line you could not tick in the 'Confident' column is a mark you are currently at risk of dropping. Our SACE Exam Crash Course is built to close exactly those gaps — we mapped four years of real SACE papers to find where marks are actually lost, then weighted the teaching toward those points instead of re-covering content you already know.

## The SACE Exam Crash Course — Biology

- 28 September – 10 October · Methods, Chemistry, Physics, Biology
- 12 hours of teaching per subject · online or in person, same live sessions
- TopMark Biology textbook included free
- Finishes with a full mock exam, marked and returned with your personal mark-loss breakdown
- 32 five-star Google reviews · 100% of our 2025 cohort scored above a 90 ATAR

From \$349 for one subject, or \$20/hr across all four. A \$99 deposit secures your spot. Early bird pricing ends 6 September.
